

Detective Audiometer

Pure Tone Screener with Included Printer

Can your patients “detect” tones during their hearing screening? As an automatic audiometer, the Detective provides the fastest and easiest tests that print in seconds.

- Automatic or traditional pure tone tests
- Printer is included
- Voice prompts help kids during the test
- English and Spanish voice prompts included
- Store up to 300 audiograms
- View the test procedure and results on the LCD screen

EXCELLENCE IN HEARING SCREENING

SINCE 1937

Detective Audiometer

Automatic testing is fast and easy

Unique capabilities

The Detective Audiometer is an automatic screening audiometer that provides fast, easy tests that print in seconds.

As an automatic audiometer, the pure-tone test runs on its own - saving you time and the need for constantly working with the dials. You can even watch the test as it proceeds on the large LCD screen.

Also included are voice prompts (in English and Spanish) that give your patients instructions at the beginning of the test as well as directions if they miscue during the test:

"As soon as you hear a tone, even if it is very soft, quickly press and release the hand button."

The Detective's fun look gives testing an almost play-like feel and you can still choose the manual testing mode for a traditional pure-tone screening process.

In addition:

- Store up to 300 audiograms at a time
- Printer is included

Features and benefits

- **Automatic testing:** this fast mode let's the test run on its own
- **Manual testing:** for the traditional hands-on procedure
- **Voice prompts:** automatic prompts help patients if they miscue during the test
- **English and Spanish:** reach a wider patient base with their native language
- **Included printer:** quality printouts in seconds
- **Storage:** store up to 300 audiograms at a time
- **Portability:** tote the audiometer, printer and accessories in the optional carrying case

Product includes
